

FLASH! Just a reminder that
Ian G4FSU from Wells,
will be giving a talk
entitled
**“Millimeter waves, not only for
communications”**

to

RSGB Bristol

on Mon 27th 1930hrs – hope you can get along ...

At the Bristol Lawn Tennis & Squash Club, Redland Green, Redland, Bristol BS6 7HF

Millimetre Waves: not quite light, not quite radio waves. Frequencies in this little-used and little-understood part of the spectrum exhibit some strange characteristics.

Liquid explosives, plastic explosives?
Heroin, aspirin?
Border controls, no controls?
Designer clothing, no clothing?

From medicine to mobile phones, some interesting and potentially significant applications are just starting to emerge as research into some unexpected properties of millimetre waves is starting to reveal, and look set to play an increasingly large part in our everyday lives.
Ian will take a lighthearted and, er.... revealing, jaunt through this intriguing part of the elec-tromagnetic spectrum.

C & DARS 2m Club Net

A successful trial was conducted on Friday 24th September commencing at 1830. Simplex mode was used on 145.400 MHz.

John Church G3HCH and **Wil Oliver 2W0DNI** started proceedings.

They were soon joined by **Tony Marsh 2E0JWF** from the centre of Bristol.

C & DARS member **Chris Richards MW3QRN** came booming in from Caldicot.

The group were also pleased to welcome two non-members -

Mike Sheargold M0MAS in Horfield, Bristol and

Colin Morgan M0PCH operating from Hartcliffe, Bristol.

We did not seem to have any significant problems despite Wil's poor location near the bottom of Pwllmeyric hill on the A48.

The net will operate again on Friday 1st October at 19:00 so please join us - we hope to make it a regular feature - schedules to be determined after discussion at the next C&DARS meeting.
